Dispersion vs. κ* Calibration
(Higher κ* → More Learner Disagreement)

Legend:
- Observational (trimmed)
- Experimental (κ* ≈ 1)
- Trend: slope = 1.36

Data labels: α=0.10, α=0.20, α=0.30

**Calibration Summary**
Log-log slope: 1.36
(Higher κ* → Higher dispersion)

Dispersion scales with κ* □

X-axis: Condition Number κ*
Y-axis: Learner Dispersion ($)
